PROJECT REVIEW : MILESTONE PROJECT – 1

Date: 23-03-2026

End-to-End Event Lifecycle & Ticketing Platform

SDG: SDG 9 – Industry, Innovation, and Infrastructure

Presented By:

Banala Pavan Kumar – VTU26134 – 23UECS1021.

Courses Handling Faculty:f

Dr.Hafizur Rahman – Associative professor

INTRODUCTION

1

- In the modern digital world, event booking systems are essential for efficient management and user convenience. Many existing systems still rely on manual processes, which leads to inefficiency and poor user experience. This project, *Eventify*, is a web-based platform that allows users to explore, view, and book events online. It provides an integrated system for event discovery and booking with real-time data. The system also includes an admin panel to manage events efficiently. It reduces manual work and improves accuracy. This project is highly relevant for real-world applications like ticket booking platforms. It ensures centralized and automated event management.

PROBLEM STATEMENT

1

2

3

4

5

6

7

8

9

- In many small-scale event management systems, booking and tracking are done manually. This leads to inefficiency, data inconsistency, and difficulty in managing events. Users face problems in discovering events and booking tickets easily. There is no centralized system to handle bookings and event updates. Manual systems also increase the risk of errors and data loss. Therefore, there is a need for an automated, reliable, and user-friendly system. The system should allow easy event management and booking. This project aims to solve these issues using a web-based solution.

OBJECTIVE(S)

1

2

3

4

5

6

7

8

9

- To design and develop a web-based event booking system using PHP and MySQL.
- To implement user booking and admin event management modules efficiently.

PROPOSED SYSTEM

1

2

3

4

5

6

7

8

9

- - Provides user login and registration using phone/email
 - Displays events dynamically from database
 - Allows users to view event details
 - Enables users to book tickets online
 - Stores booking details securely in database
 - Provides admin dashboard to manage events
 - Supports image upload for event banners
 - Improves efficiency compared to manual systems

PROPOSED SYSTEM ARCHITECTURE

Input:

1

User login details

2

Event details (admin input)

3

Booking request

4

Processing:

5

Authentication validation

6

Event fetching from database

7

Booking calculation

8

Session handling

9

Database:

Users

Admins

Events

Bookings

Output:

Event list

Booking confirmation

Admin dashboard

Data Flow Diagram

TECHNOLOGIES USED

1

Frontend:

HTML, CSS, JavaScript

2

Backend:

MySQL.

3

4

Middleware:

PHP.

5

6

Tools:

XAMPP, VS Code, phpMyAdmin

7

Hardware/Software:

Windows OS, Web Browser, Apache Server

8

9

MODULE DESCRIPTION

1

Module 1: User Management

Handles user login and registration using phone/email and secure password verification.

2

Module 2: Event Display

Fetches and displays events dynamically from the database (Home, Live Events, Dining).

3

4

Module 3: Event Details & Booking

Shows detailed event info and allows users to book tickets.

5

6

Module 4: Booking Management

Stores user bookings and allows users to view booking history.

7

8

Module 5: Admin Management

Admin can add events, upload images, and manage system data through dashboard.

ADVANTAGES & LIMITATIONS

1

Advantages:

2

- Automated system.

3

- User-friendly interface.

4

- Secure authentication.

5

- Real-time event display.

6

- Centralized database.

7

Limitations:

8

- No online payment system

9

- Runs on localhost

- No notification system

Thank you
